

Transitions into and through Higher Education for pre-registration nursing students

John Freeman, Barry Aveyard, Claire Walsh*, Jackie Parkin*, Course Leaders, Pre-Registration Nursing (formerly) (HWB)

Summary

This is a student-led project to develop a range of mixed media resources to enhance learner autonomy among pre-registration nursing students. The resources are student-led in development and can include service user and practitioner perspectives to support transition into Higher Education and graduation into the workforce. It is our experience that there are key transitional points for our students across their programme, which are focused around progressing through the academic levels and making transitions into the workplace. We propose that students will be invited to develop a range of materials that can be used to signpost and support transitions for the students at critical moments in their student lives. In addition to the materials created, the participants will also be able to demonstrate key transferable and employability skills, to promote peer support, and learner autonomy. Materials developed will contribute to supporting attrition and retention amongst the nursing student body.

What's going well?

- ✓ The student meetings have provided a range of exceptionally rich material which should be of great benefit to other students in easing transitions;
- ✓ The CETL Team have been really supportive in providing help, guidance and practical support;
- ✓ The Project neatly complements other work being done in Nursing to support the student experience and reduce attrition.

Current Progress

So far the Project Team have conducted a number of meetings with a range of Nursing students, and have used some of the material from the Faculty Learner Autonomy Project completed by Claire Craig and Karen Booth to inform a questionnaire that has been used to seek views about issues related to transitional points in Nursing. Views have been sought on factors that help and hinder learning, and how learner autonomy can be developed. A range of issues has so far been raised including the following:

- Feeling part of a social group;
- Getting support from your lecturers;
- Accessing well-organized Module sites on BlackBoard;
- Being able to apply learning to the real world;
- Being taught by enthusiastic lecturers;
- Classroom sessions being run well.

Students were asked whether any of the following factors had affected their learning:

- Doing a full-time course and having to work part-time as well;
- Being a carer;
- Having a readiness to learn;
- Being able to ask for help;
- How they are assessed on the course;
- Seeing success early in their course;
- Getting good quality feedback;
- Their overall workload;
- Their timetable.

What's next?

The next steps are to meet with Service Users and Carers, and to this end a series of meetings has been set up for January 2010. Some of the students who have attended the meetings have given their agreement to be filmed and/or recorded, and the materials will be produced early in January, ready to be piloted for the w/c 25TH January 2010. Evaluation will be sought and the final materials will be implemented for the Sept 2011 cohort.
